Imported high power solar water pump

What are solar energy-powered water pumps? Solar energy-powered water pumps are water pumps running on the electricity that is generated by solar energy. For generating solar power, solar photovoltaic (PV) systems are used for complementary energy sources, they are deployed alongside diesel pumps in areas with plenty of sunshine and where the cost to run power lines is high. How to promote solar powered water pumping systems in India? Therefore, to promote solar powered water pumping systems across India, our Indian government has launched the PM-KUSUM (Pradhan Mantri Kisan Urja Suraksha evam Utthaan Mahabhiyan) scheme. Under this scheme, central government is providing up to 90% subsidy on solar water pumps through MNRE department. What is a solar well pump used for? Beyond the listed uses, solar well pumps find application in a multitude of areas, including:

- Residential water supply: Ensure a steady flow of clean water for your home.
- Community water projects: Provide sustainable water access to remote communities.
- Environmental restoration: Support ecosystem revitalization efforts.

Who makes solar water pumps? WBS began producing water pumps in . In , we independently developed and produced solar water pumps. We have OEM production for more than 200 solar pump dealers around the world. Over the past 10 years, we have produced more than 150,000 sets of solar water pumps that have been exported to other parts of the world. How to choose a solar water pump system? First, you should confirm whether the solar water pump system is direct feed or with Tank System. You can refer to the below two diagram to calculate the pump head. In practice, we normally choose the pump head 10%-20% higher than the actual demand in order to make sure the pump can work properly. How do solar well pumps work? Revolutionize Your Water Pumping with Sustainable Solar Well Pumps! Harness the power of the sun with our high-performance solar-powered deep well pumps. Our advanced MPPT inverters efficiently convert solar energy into electricity, driving the pump's motor to continuously extract water from depths reaching hundreds of meters.
