A Brief Guide to the Sep 2, 1 EDLC - Supercapacitor Compared to other capacitor technologies, EDLCs (Electric Double Layer Capacitor) are outstanding for their very high charge storage capacity Supercapacitors The Time Constant, TSupercapacitors Energy DensityApplicationsCharge and Leakage CurrentsMeasurementsLife CalculationsEnvironmental Operation RisksCharacteristicsThe time constant of capacitors is the time needed to discharge a loaded capacitor through the insulation resistance (IR) to  $1/e$  (~37%) of the initial voltage. This constant denominated  $t(\tau)$  is the product of IR and C (capacitance), usually abbreviated RC. Supercapacitors don't have any dielectric even if the true leakage current represents a  $k$  in See more on passive-components.euPublished: Oct 24, 2018TI [PDF]How to Quickly and Safely Charge SupercapacitorsApr 14, Most super capacitors (supercaps) can be discharged down to 0 V and recharged to their maximum voltage with the manufacturer recommended charge current.
